Two new biology majors, Wynona and Jason, have been hired as work-study students in the lab. The amount of time they spend in close proximity is a powerful predictor that they will at least develop a friendship.

As the days and months go by, their liking for each other will most likely increase. This is because of the 2 __________ effect, according to 3 psychologists, is adaptive; our ancestors survived because they found that what was different was potentially dangerous, and what was 4 __________ was safe.

Wynona and Jason also find each other 5 __________, which contributes to their budding relationship. Wynona and Jason begin dating and, as they get to know each other, their liking increases because they 6 __________ (share/do not share) interests and values. Also, because they both feel that the benefits of their relationship outweigh the costs, the 7 __________ theory predicts that the relationship will grow and develop.

Using the 8 __________ theory of emotion to explain what has now become passionate love between Jason and Wynona, Elaine 9 would identify the ingredients of their love as physical 10 __________ and cognitive 11 __________.

With time, their passionate love may develop into 12 __________ love, which is characterized by equal giving and receiving by both partners, or both revealing their dreams and worries, or self-
